Project Information

2023/2024

The final project should be a scientific poster. The goal is to forecast a time series related to a topic of interest. You will apply the Box-Jenkins methodology. The evaluation criteria are:

1. (10%) Originality (datasets from class examples are not as valuable)

2. (10%) Presentation (aesthetic quality of the poster)

3. (15%) Organization and structure

4. (15%) Content (evidence of reflection and analysis of the main literature of the area will be valued)

5. (20%) Box-Jenkins component

6. (15%) R component (Efficiency of the code, use of R Markdown to develop the poster is a plus)

7. (15%) Conclusion and reflection (What are the implications of your work?)

The deliverables are:

1. The poster;

2. The R code;

3. The dataset (if it is necessary).
